

Measuring and Reducing Postgres Transaction Latency

Fabien Coelho

MINES ParisTech, PSL Research University

pgDay Paris – March 23, 2017

2 Performance Comparisons

- Two Connection Costs
- Latency Pitfalls
- Benchmarking with Rate and Limit
- Three Storage Options
- Two Protocol Impacts
- Four Query Combination Tricks
- Reducing Server Distance
- Performance Scalability
- Miscellaneous Settings

■ TPC-B-like banking transaction

```
-- random ids and amount
\set aid random(1, 100000 * :scale)
\set bid random(1, 1 * :scale)
\set tid random(1, 10 * :scale)
\set delta random(-5000, 5000)
-- actual transaction
BEGIN;
UPDATE pgbench_accounts
    SET abalance = abalance + :delta WHERE aid = :aid;
SELECT abalance
    FROM pgbench_accounts WHERE aid = :aid;
UPDATE pgbench_tellers
    SET tbalance = tbalance + :delta WHERE tid = :tid;
UPDATE pgbench_branches
    SET bbalance = bbalance + :delta WHERE bid = :bid;
INSERT INTO pgbench_history (tid, bid, aid, delta, mtime)
    VALUES (:tid, :bid, :aid, :delta, CURRENT_TIMESTAMP);
END;
```

Pattern

- 3 updates
- 1 insert
- 1 select

Rate & Limit
Storage
Protocol
Combinations
Distance
Scalability
Miscellaneous

Conclusion
Wrap-Up
Lessons
Contributions

Things to Bring Home

in-memory OLTP load

NoTPS not only TPS
latency-throughput compromise

latency matters!

Performance experiment and measure
pgbench is improving...

do not assume!

Postgres version
sorted and flushed checkpoints

9.6!

High costs

network, parse & plan

RW load ACID

SSD ≫ HDD

RO load pg as a cache manager

About Core

& Andres Freund

- sorted checkpoints
- flushed checkpoints

About pgbench

& Robert Haas

- expressions
- mixed and weighted scripts and builtins
- better statistics
- improved usability
- rate and limit load
- debug...

\set ...

-b/-f ...@...

stddev, per script...
